## Homework 6

### HW6 Topics: CTFT and DTFT

**NOTE:** You will notice that some selected problems are given answers through "Show that" statements. Make sure you show all your work clearly for every problem.

Throughout the assignment,  $u(t)$  is the unit step function,  $r(t) = tu(t)$  and  $p(t) = u(t) - u(t - 1)$

#### Problem 1

Consider the signal  $x(t)$ , which consists of a single rectangular pulse of unit height, is symmetric about the origin, and has a total width  $T_1$ .

- (a) Sketch  $x(t)$ .
- (b) Sketch  $\tilde{x}(t)$ , which is a periodic repetition of  $x(t)$  with period  $T_0 = 3T_1/2$ .
- (c) Compute  $X(\omega)$ , the Fourier transform of  $x(t)$ . Sketch  $|X(\omega)|$  for  $|\omega| \leq 6\pi/T_1$ .
- (d) Compute  $a_k$ , the Fourier series coefficients of  $\tilde{x}(t)$ . Sketch  $a_k$  for  $k = 0, \pm 1, \pm 2, \pm 3$ .
- (e) Using your answers to (c) and (d), verify that, for this example,

$$a_k = \frac{1}{T_0} X(\omega) \Big|_{\omega = (2\pi k)/T_0}$$

- (f) Write a statement that indicates how the Fourier series for a periodic function can be obtained if the Fourier transform of one period of this periodic function is given.

#### Problem 2

Consider the periodic signal  $\tilde{x}(t)$  in Figure P2-1, which is composed solely of impulses.

Figure P2-1

- (a) What is the fundamental period  $T_0$ ?
- (b) Find the Fourier series of  $\tilde{x}(t)$ .
- (c) Find the Fourier transform of the signals in Figures P2-2 and P2-3.
- (d)  $\tilde{x}(t)$  can be expressed as either  $x_1(t)$  periodically repeated or  $x_2(t)$  periodically repeated, i.e.,

$$\tilde{x}(t) = \sum_{k=-\infty}^{\infty} x_1(t - kT_1), \quad \text{or} \quad (\text{P2-1})$$

$$\tilde{x}(t) = \sum_{k=-\infty}^{\infty} x_2(t - kT_2) \quad (\text{P2-2})$$

Determine  $T_1$  and  $T_2$

- (e) Verify that the Fourier series of  $\tilde{x}(t)$  is composed of scaled samples of either  $X_1(\omega)$  or  $X_2(\omega)$ .

Figure P2-2

Figure P2-3

### Problem 3

Determine the Fourier series coefficients for the three periodic sequences shown in Figures P3-1 to P3-3. Since these three sequences all have the same nonzero values over one period, we suggest that you first determine an expression for the envelope of the Fourier series coefficients and then sample this envelope at the appropriate spacings in each case.

(a)

Figure P3-1

(b)

Figure P3-2

(c)

Figure P3-3

### Problem 4

Consider a discrete-time system with impulse response

$$h[n] = \left(\frac{1}{2}\right)^n u[n]$$

Determine the response to each of the following inputs:

(a)  $x[n] = (-1)^n = e^{j\pi n}$  for all  $n$

(b)  $x[n] = e^{j(\pi n/4)}$  for all  $n$

(c)  $x[n] = \cos\left(\frac{\pi n}{4} + \frac{\pi}{8}\right)$  for all  $n$
